

Adding Value Where It Counts.

DynaCash™

Automated Cash Dispenser & Recycler Connectivity.

DYNACASH GIVES YOUR TELLER LINE...

SECURITY

Password protected logons and 3 security levels to authenticate users. Optional Duress Dispense.

CONVENIENCE

The CC-5000 terminal acts as a Central Station for Vault Buys and Sells – the online tellers don't get interrupted by Vault activity.

SIMPLICITY

Easy usage makes DynaCash practically transparent to the end user. Tellers can focus on their customer, not on how to get or give cash.

EASY AUDITING

The audit trail is easy to follow and provides exactly what tellers need to balance. An Electronic Journal option allows for transaction history storage on a secure server.

FREEDOM

Your teller platform doesn't have to dictate which equipment can be attached. DynaCash works with practically any teller app and supports all of the popular bill dispensers and recyclers.

Thousands of DynaCash™ Systems Have Been Installed at Banks, Credit Unions, Casinos, and Retail Stores Worldwide.

DynaCash allows teller cash dispensers and recyclers to be driven by any Windows teller platform or retail application. No modification to your financial program is required.

You benefit from DynaCash by being able to integrate Cash Dispensers and Recyclers with almost any financial application without waiting for costly custom integration development. Generally, DynaCash allows machines to be installed and working with a financial application in less than a day.

The compact CC-5000 terminal is conveniently located next to the cash equipment. Management tasks such as adding inventory and printing reports are performed at the CC-5000 without interrupting tellers at their workstations.

Security is enhanced by recording all recycler activity and manager actions to either a journal printer, an Electronic Journal on a secure file server, or both.

The Simple Solution To Cash Handling Automation.

Tellers use a simple "Hot Key" scheme to dispense cash using a Preferred Bill Mix or to allow the teller to select the bills by denomination. They begin a cash deposit with a "Deposit Hot Key". When complete, DynaCash sends the deposit amounts into the teller app entry fields.

CC-5000 Rear Panel View

5.3"

Rear panel Connections:
 1 - 8-pin RJ-45 10/100 LAN
 2 - USB Type B Receptacles
 4 - 8 pin RJ-45 RS-232 Serial

The CC-5000 terminal handles all communications with the cash equipment, and the DynaCash software provides the link to the teller application.

Adding Value Where It Counts.

DynaCash™

Automated Cash Dispenser & Recycler Connectivity.

RELIABLE

Add-On Technologies has been providing robust interface solutions for the financial industry since 1994. Our “no complexity” approach to installation and easy usage means your machinery is brought online in record time and with a minimum of teller training.

PROVEN SOLUTION

Among our very satisfied end users are Banks, Credit Unions, Casinos, and Department Stores.

TECHNICAL SUPPORT

Our deep background in Cash Automation means we find the right answers fast. We stand behind our products and we provide industry-acclaimed tech support.

DYNACASH INCLUDES:

- DynaCash Software on CD
- CC-5000 Terminal
- Power Supply
- 15' USB Cable (2)
- Journal Printer Cable
- Dispenser/Recycler Cable
- Operators Manual

DynaCash System Overview

DynaCash lets you immediately begin to realize the Return on Investment you expect from your cash handling machinery, by instantly boosting teller productivity. By eliminating double entry during cash transactions, the movement of cash between teller and customer becomes rapid and accurate, leaving your tellers more time to develop their customer relationships.

With its unique CC-5000 terminal, DynaCash also offloads the burden of management in handling vault buy and sell transactions for the tellers. Tellers are now able to obtain or sell excess drawer cash directly from the CC-5000, without involvement from their managers.

For cash withdrawals, DynaCash reads the Cash Back amount from the teller app and dispenses the cash.

For cash deposits, DynaCash receives deposited amounts from the bill recycler and populates the teller app Cash-In entry fields. A single key press by the teller performs either cash transaction type.

DynaCash has a comprehensive feature set that includes Electronic Journal to secure server, Reliable Support for Citrix and Remote Desktop environments, Optional Remote User Management, Duress Dispense, Optional Independent Teller Batch Totals, Capability of completely standalone operation if the PC's go down, 3 levels of preferred bill mix, and capability for using the recycler as a bill discriminator to verify counts for recyclers that support it.

Putting All The Pieces Together To Make Currency Recycling Work Efficiently For You.
